# Using Excel Workbook - 5

Copy the data to new Excel sheet
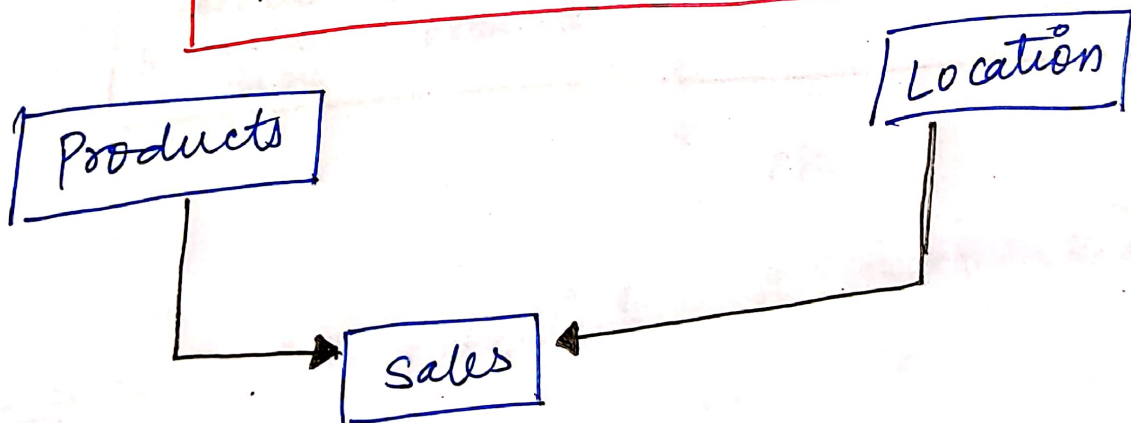

↓

Convert raw data into Table

↓

Name the table as:

(i) sales

(ii) products

(iii) Location

Table Connections

Products

Location

Sales

# # Building Table Connections # #

select any cell of the Table

↓

Data : Ribbon

↓

Relationship

↓

New

↓

A dialogue Box Appears

↓

| Table : | column : |
|---|---|
| worksheet ~~table~~ : Sales | Product |
| | Related column : |
| Related Table : | Product |
| worksheet ~~table~~ : products | |

↓

OK

⇒ it will establish a relationship b/w 2 table and parallely build a data model (mental model) to deal with power pivot –

Now,

Add    Another    Relationship
                    ⇓

Click : New    on    this    dialogue
        box (relationship wala)

↓

Table :         Sales
Data model :    ~~source~~           column :
table                                Geography

                                     column :
Related Table :                      Geo
Worksheet : Locations
table                    ↓
                         ok

# Now,    we    have    2    active    relationship
                                ↓
                                close
